

The Right-Sized Solution for Campus and Guest Transportation

The **GEM electric vehicle** platform delivers efficient, quiet, and flexible transportation designed for campuses, resorts, and private properties where traditional vehicles fall short.

The GEM electric vehicle offers a modern approach to moving people across your property. Designed for environments where large shuttles are inefficient and traditional options lack flexibility, GEM provides a quiet, comfortable, and cost-effective transportation solution.

Whether supporting employee movement across a corporate campus or enhancing the guest experience at a resort, GEM helps operators improve efficiency while delivering a better overall experience.

Built for the Way People Move Today

Efficient by Design

Right-sized for short-distance transportation, GEM allows operators to move people quickly and easily without the overhead of larger vehicles.

Lower Cost to Operate

Electric power and simplified maintenance help reduce operating costs while supporting long-term fleet efficiency.

Elevated Experience

Quiet electric operation and an open, accessible design create a more comfortable and enjoyable ride for both guests and employees.

Flexible for Any Environment

From corporate campuses to resort properties, GEM adapts to a wide range of use cases with configurable layouts and deployment options.

Key Features

- Fully electric, low-speed vehicle platform
- Street-legal on designated low-speed roads
- Configurable passenger seating options
- Quiet, smooth ride with zero emissions
- Designed for durability and daily fleet use
- Simple charging and low operating cost

Backed by ABC Companies' nationwide support and service network, GEM is more than a vehicle. It is a flexible mobility solution designed to help you move people more efficiently while enhancing the overall experience across your property.
